EWS

To access the HP Embedded Web Server (EWS) for your printer, follow these steps:

1. Connect to the same network as your printer: Make sure your computer or device is connected to the same Wi-Fi network as your printer.
2. Find the printer's IP address:
 - On the printer's control panel, navigate to the network settings or network status.
 - Look for the printer's IP address. It will be a series of numbers separated by periods (e.g., 192.168.1.100).
3. Open a web browser:
 - Launch a web browser (such as Chrome, Firefox, or Edge) on your computer or mobile device.
4. Enter the printer's IP address:
 - In the address bar of your web browser, type the printer's IP address and press Enter.
 - This will take you to the HP EWS homepage.
5. Log in (if required):
 - If prompted, enter the administrator credentials (username and password) for your printer.
 - By default, the username is usually "admin," and the password is often left blank. However, you may have set up custom credentials during printer installation.
6. Explore the EWS:
 - Once logged in, you'll have access to various printer settings, status information, and maintenance options.
 - You can configure network settings, check ink levels, update firmware, and perform other administrative tasks.

Remember that the exact steps may vary slightly depending on your printer model. If you encounter any issues or need further assistance, consult your printer's user manual or visit the HP support website for specific instructions related to your printer model. 🌐
